FOR IMMEDIATE RELEASE

Symmetry Software Releases Batch Process Version of Payroll-Point.com

Scottsdale, AZ (Dec.11, 2009) Payroll Point is the latest innovation from Symmetry Software, the firm behind PaycheckCity.com. Three different versions are available.

The most basic version is “**Payroll Point Lite**,” a free web-based service that helps you determine the proper withholding tax jurisdictions based on an employee’s residence address or work address. The second version is “**Payroll Point Pro**.” It is also a web-based service that uses the employee’s home and work addresses and nexus settings to show a detailed withholding tax list. The pro version is intended for mid to large corporations but a free trial is available.

The newest version is “**Payroll Point Batch**.” If you have an existing employee database and want to assess if your withholding tax settings are correct, simply upload a .csv data file, and Payroll Point Batch will automatically process the records and return the proper withholding tax settings for each data set.

“Payroll Point Batch is ideal for large employers who recognize the need to clean up their employee records to ensure proper tax settings are utilized in their HR/Payroll system,” said Jon Bohnert, Executive Vice President at Symmetry Software.
